GLYCO - C

Dermatologists celebrate Glyco-C as a breakthrough in the new era of skin care. Medical science recognizes Vitamin C as a major player in a strategy for maintaining skin that is smooth, youthful and healthy. However, the Vitamin C we ingest from fruits or vitamin tablets do not significantly affect the skin. Dermatologists agree that topical application of Vitamin C stimulates collagen production, protects the skin from oxidation and reduces the aging of the skin caused by sun damage.

Glycolic acid removes dead skin cells and is wonderful for reducing wrinkles; it also facilitates more expedient penetration of Vitamin C. Glycolic acid clears pores that are clogged and cause acne in addition to normalizing and lightening hyper-pigmentation. Like Vitamin C, Glycolic acid increases collagen production. It plumps up the skin and eliminates fine lines to refine a rejuvenated, translucent appearance.

Glyco-C is a state-of-the-art skin care line that utilizes the synergy of Glycolic acid and Vitamin C. These nutritious acids penetrate the skin via nanospheres to deliver the most visible results in the treatment of wrinkles, acne and hyper-pigmentation.

Glyco-C Lightening Complex

Sun-damaged skin,
Discolored with Hyper-Pigmentation

BENEFITS:

- Treats hyper-pigmentation, freckles and sun spots.
- Lightens skin discoloration caused by pregnancy or oral contraceptives.

ACTIVE INGREDIENTS:
