SOLAR ENERGY

From the Deepest Place on Earth

Mineral Rich Line From The Dead Sea

SOLAR ENERGY

The Solar Energy line is derived from minerals and trace elements of the Dead Sea, which has for centuries been one of the earth's most prized natural resources for health and beauty. At 1,400 feet below sea level, the Dead Sea is the lowest point on the globe. The Dead Sea is a concentrated storehouse of the richest deposits of potassium, magnesium, bromine, calcium, sodium and chlorine in the world. These valuable elements surface in the thermal and sulfur springs, and in the black mud of the seabed.

Medical research has found that Dead Sea minerals and salts confer a remarkable therapeutic effect on the skin and body. Consequently, people from around the world who are educated in skin care and body therapy visit the Dead Sea to discover the powers of natural healing.

The Solar Energy line combines the remarkable benefits of the Dead Sea's natural minerals, salts and mud, into a range of sophisticated products that provide the skin with a full complement of therapeutic offerings. The potent levels of bromide and chlorine of this line stimulate circulation and rejuvenate the skin. Skin appears more youthful, smooth and healthy.

Acne Cleansing Pads

For Oily Skin / Contains 60 Pads

BENEFITS:
