

# O'melon ALA Mask

- ✓ The Omelon ALA Mask 13% is a Korean clinical-grade sheet mask designed for photodynamic therapy (PDT) protocols
- ✓ Each mask is saturated with 13% 5-aminolevulinic acid (ALA), a recognised photosensitiser used in non-invasive LED treatments for acne and seborrheic skin
- ✓ PDT combines this photosensitiser with specific light wavelengths to selectively modulate sebaceous glands and reduce bacteria
- ✓ Cleared by regulators as a safe and effective option for acne management

## MAIN INGREDIENTS

<b>Allantoin</b>  ▶ ALLANTOIN FOR SKIN CALMING	<b>5-aminolevulinic acid (ALA)</b>  ▶ 13% 5-AMINOLEVULINIC ACID (ALA) FOR TARGETED SEBUM REGULATION	<b>Lecithin</b>  ▶ LECITHIN FOR ALLEVIATING INFLAMMATION

## BEFORE & AFTER

**Case 1**

**Case 2**

**Case 3**

## PROFESSIONAL USE GUIDELINES

### Acne Treatment

- 1 **CLEANSING** Begin with a thorough cleanse to remove make-up, oil and debris from the skin.
- 2 **ACNE TREATMENT** Perform acne treatments.
- 3 **APPLY ALA MASK** Place the ALA mask evenly over the treatment area and leave it on for approximately 15-25 minutes to allow the photosensitiser to absorb.
- 4 **OMEGA LED LIGHT ACTIVATION** After removing the mask, expose the treated area to blue LED light at around 423 nm wavelength. This wavelength activates the ALA and targets acne-causing bacteria.
- 5 **SOOTHING PACK** Apply a modeling mask to calm and hydrate.
- 6 **FINAL CARE** Apply a moisturising cream and sunscreen. (ALA-treated skin is more sensitive to light)

### After Laser

- 1 **COOLING & SOOTHING** Immediately after laser, focus on cooling & soothing the skin to reduce redness and heat.
- 2 **OMEAGA LED INFRA-RED (IR) LIGHT MODE** Use an Omega light device in IR mode. The protocol notes that red wavelengths (~640 nm) are applied for at least 10 minutes. Green (532 nm) or yellow (583 nm) light may also be used depending on the severity and the skin condition.
- 3 **SOOTHING PACK** Apply a modeling mask to aid recovery.
- 4 **FINAL CARE** Finish with a moisturising cream and sunscreen. Post-treatment sunscreen helps prevent hyperpigmentation.
